Integrated Project

Project: Insurance Claims Scenario

An insurance company has been struggling to actively track their claims vs collected premiums and would also like to understand the type of client more likely to claim. You have been supplied with the insurance claims data to create the insight the company requires.

Problem Statement:

Insurance company does not have the appropriate dashboard reports to actively monitor their claims and premiums as well as analyze their clients and insured assets. Build a interactive Power BI dashboard report to remedy the situation and add value.
